LED`s

|	Description	
Bay LED		Stand by
		Injecting fresh air
		Test
		Purging remaining gas
		Save a log data
		Test pass
		Test Fail
Power LED	🟢 Green: Power On	
	🔴 Red: Low Battery	
	🟠 Orange: USB not attached or full storage	

Set up Calibration Gas Cylinder

- Remove thumbscrews and lift the handle
- Install the cylinder to the gas regulator
- Fasten the cylinder straps and close the cylinder compartment
- Check the pressure gauge on the front panel
- Re-install thumbscrews

Important Notes

- USB drive must be installed to store the test results
- For bump testing, ensure the cylinder gas concertation is above the "Low Alarm" setting of the SGT
- For calibration, ensure the SGT "Cal Concentration" setting is the same as the cylinder gas concentration
- Any monitors that fail a bump test must be calibrated before use
- Do not use a monitor that fails a calibration
- When connecting SENKO IR Link, make sure "Write" button has clicked to save customized settings.

Gas bottle   USB

Bump Test

- Insert the monitor(s) into the bay facing down
- Press the bump test button for 2 seconds to execute Bump Test
- Up to 1,000 bump tests on a single charge

Calibration

- Insert the monitor(s) into the bay facing down
- Press the calibration button for 2 seconds to execute Calibration test

Test Results

- All (six) blue Bay LEDs illumination indicates if the SGT has passed the test
- The third blue Bay LED illumination indicates if the SGT has failed the test

Trouble Shooting
