IMPORTANT NOTES

- Using the MENU button to cancel a task or return to the previous menu.
  - Cancel task : Press and hold the MENU button for 2 second. (Only enable the Standby and Channel selection steps)
  - Return to the previous menu : Press the MENU button briefly.
- A **USB flash drive or SD card** must be inserted for data storage.
  - Only one storage device (USB or SD card) can be used, depending on the docking device settings.
  - Only FAT32 file systems are supported.
  - Use an SDHC Class 10 SD card. (UHS-II not supported)
- The monitors equipped on the docking device can be updated to the **latest software version through the device menu**.
  - Ensure that the latest firmware is saved on the storage device using Docking Manager software.
- For **bump testing**, the cylinder gas concentration must be **above the "Low Alarm"** level set on the monitors.
- For **calibration**, the **"Calibration Concentration"** set on the monitors must match the cylinder gas concentration.
- Any monitor that fails a bump test or calibration must be **re-tested or re-calibrated**.
  - If it fails repeatedly, do not use the monitor and contact your authorized distributor.
- When connecting the docking device to the **Docking Manager software** via IR Link:
  - Place the IR Link only on Bay-1.
  - Always click "Write" in the software to save customized settings.

BUMP TEST

- Insert the monitor(s) into the bay(s) with the front side facing **down**.
- On the home screen, use the **UP** or **DOWN** button to select **BUMP TEST**, then press **SELECT** to confirm.
- Wait 5 seconds for the device to detect the monitor(s).
- Use the **UP** or **DOWN** button to select a gas channel. Press **SELECT** to activate or deactivate the selected channel.
- Finally, press and hold the **SELECT** button for 2 seconds to start the test.

CALIBRATION

- Insert the monitor(s) into the bay(s) with the front side facing **down**.
- On the home screen, use the **UP** or **DOWN** button to select **CALIBRATION**, then press **SELECT** to confirm.
- Wait 5 seconds for the device to detect the monitor(s).
- Use the **UP** or **DOWN** button to select a gas channel. Press **SELECT** to activate or deactivate the selected channel.
- Press and hold the **SELECT** button for 2 seconds to start the calibration.

TEST RESULTS

- **Pass**: All six blue bay LEDs will illuminate when the monitor(s) pass the test or calibration.
- **Fail**: Only the third blue bay LED will illuminate when the monitor(s) fail the test or calibration.

TROUBLESHOOTING

- **Bay LEDs do not turn on / Test not performed**
  - Clean the IR windows on the monitor(s).
  - Check for any IR signal interference.
  - Verify if the monitor(s) are in a gas alarm state.
- **All tests failed**
  - Check if the gas cylinder is empty.
  - Confirm the gas has not expired.
  - Ensure the gas concentration is correct.
- **Test results are not stored**
  - The storage device is not inserted, or the storage is full.
- **Still having issues?**
  - Please contact the product's authorized distributor or service center for assistance.
